

Integration Guide Instructions

Configure Okta SSO for Astrix Login

This guide instructs how to configure Okta as the default Identity Provider to facilitate Single Sign On (SSO) with the Astrix application.

Supported Features

- Service Provider (SP)-Initiated Authentication (SSO) Flow - This authentication flow occurs when the user attempts to log in to the application from Astrix.
- Identity Provider (IDP)-Initiated Authentication (SSO) Flow - This authentication flow occurs when the user attempts to log into Astrix from Okta.
- Automatic account creation in Astrix on initial SSO.

Requirements

In order to configure SSO through Okta, you must have administrator access to your Okta tenant.

Configuration Steps

1. Log in to your Okta account as an Administrator.
2. In your end-user dashboard, choose Applications then click on Browse App Catalog.
3. In the Search for an Application field, search for “Astrix Security”. When Astrix Security Okta-Verified OIDC appears, click on Add.
4. Fill in the required field “companyName” with your company’s name as it appears in your email domain (your login URL will be <https://<companyName>.astrixsecurity.com>).
5. Use the option “Assign to People”, to assign users that you want to have access to Astrix.
6. Navigate to the Sign On tab and Copy the values of the application’s “Client ID” and “Client secret”, as well as the “Okta domain” and securely share these values with Astrix at support@astrix.security so the app can be granted access.
7. Finally, you will be able to login with Okta at <https://<companyName>.astrixsecurity.com>
